In view of the amendment, filed 3/17/08, the following restriction requirement is set forth below.

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 19,23,29,30,32,39,40,41,42,43, and 44 drawn to a sealed container containing a plurality of sealed packages, wherein the sealed container contains a controlled atmosphere in which the content of oxygen is less than in air, classified in class 99, subclass 467.
- II. Claims 21,24,35-38,45 and 46, drawn to a sealed package, classified in class 426, subclass 118.

The inventions are independent or distinct, each from the other because the sealed package as claimed in group II does not require the sealed container with the controlled atmosphere as recited in Group I. For example, the sealed package could be used to store bananas by itself without any specific container, whether it is the size or the controlled atmosphere. The sealed package could rest in any size room, unsealed, and without a controlled atmosphere. Also, it is noted that the sealed container of Group I does not require all of the specifics of the sealed package of Group II.

Restriction for examination purposes as indicated is proper because all these inventions listed in this action are independent or distinct for the reasons given above and there would be a serious search and examination burden if restriction were not required because one or more of the following reasons apply:

- (a) the inventions have acquired a separate status in the art in view of their different classification;

- (b) the inventions have acquired a separate status in the art due to their recognized divergent subject matter;
- (c) the inventions require a different field of search (for example, searching different classes/subclasses or electronic resources, or employing different search queries);
- (d) the prior art applicable to one invention would not likely be applicable to another invention;
- (e) the inventions are likely to raise different non-prior art issues under 35 U.S.C. 101 and/or 35 U.S.C. 112, first paragraph.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a invention to be examined even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse. Traversal must be presented at the time of election in order to be considered timely. Failure to timely traverse the requirement will result in the loss of right to petition under 37 CFR 1.144. If claims are added after the election, applicant must indicate which of these claims are readable on the elected invention.

If claims are added after the election, applicant must indicate which of these claims are readable upon the elected invention.

Should applicant traverse on the ground that the inventions are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Steven L. Weinstein whose telephone number is 571-272-1410. The examiner can normally be reached on Monday-Friday 7:00 A.M.-2:30 P.M..
